Lessons Learned From TMI

BE SAFE: Prevent Nuclear Hazards & Protect Our Children

Prohibit new nuclear power plants and license extensions; four U.S. sites are targeted for new reactors (Idaho, Illinois, Mississippi and Virginia) and dozens of older reactors are applying for 20 year license extensions, including TMI 1.

Require radioactive cleanups to be protective of children's health and drinking water, with no exemptions for military or commercial sites.

Halt the deregulation of nuclear waste that would allow toys, toasters and other consumer products to be made of nuclear waste and contaminate landfills and drinking water supplies.

Stop the Yucca Mountain and Skull Valley high-level waste dumps and the national unprecedented dangerous radioactive waste transport schemes.

Halt the nuclear power industry's "cradle to grave" assault on Native Americans and people of color from uranium mining and milling to waste dumping.
