

We are the Guardians of the Future

We are facing the prospect of losing much, if not all, of the progress which has been made to preserve our planet. The current administration has abandoned the United Nation's Paris Agreement on climate change, is working to increase coal production, to dismantle the Environmental Protection Agency - basically deplete and destroy our natural world for the benefit of money, jobs, and industry. Now, more than ever, we must remain vigilant and very active in our work as guardians of the future.
