

ONCE THROUGH COOLING

at Diablo Canyon Nuclear Plant

What is Once Through Cooling (OTC)?

Ocean water is used to cool the two reactors at Diablo Canyon

How much water does Diablo use?

2.5 BILLION
gallons
of seawater
per day!

Why should this concern commercial fishermen on the Central Coast?

Larger life forms suffer impingement

Smaller life forms suffer entrainment

Warm water discharged into the ocean stresses and kills fish, plants, and other wildlife.

How does this affect sea life?

OTC kills life forms at the bottom of the food chain

All other marine life is affected through the food chain

How Many?

It is estimated that more than

1 BILLION

such organisms are killed each year
by Diablo Canyon nuclear plant.

The marine life that is being destroyed affects the livelihood of local fishermen. Diablo Nuclear plant is having a dramatic effect on the amount of sea life present in the ocean along the Central Coast.

What laws are in place to protect the marine environment from OTC?

1972 -
Congress
passes Clean
Water Act

2001 - EPA orders new plant to use "closed-cycle cooling"

2010 - CA State Water Resources Control Board requires power plants to comply with Clean Water Act

What is happening at Diablo Canyon nuclear plant?

PG&E required to study alternatives to meet requirements

Review Committee of technical reps to oversee study

Compliance date - December 31, 2024

However -

Proposed amendment to the water quality control policy on the use of coastal and estuarine waters for power plant cooling in 2014

Expects to issue findings and call for public comment in the fall of 2015

What are the options to OTC?

Cooling Towers -
most effective
method for
reducing the
impacts of OTC

Modification - modify the
existing OTC system

Mitigation -offset environmental
damage by implementing
mitigation projects

What can I do to help protect our marine environment?

Pass a resolution calling for protection of marine life by ending OTC at Diablo Canyon

Resolution to Require Cooling Towers at Diablo Canyon Nuclear Power Plant

WHEREAS, the California State Water Board is required by law to comply with federal Clean Water Act Section 316(b), which states that the location, design, construction and capacity of cooling water intake structures must reflect the best technology available to protect aquatic life, and on May 4, 2010, the Board adopted a policy regulating the use of seawater for cooling purposes at power plants in California entitled The Statewide Policy on the Use of Coastal and Estuarine Waters for Power Plant Cooling; and

WHEREAS, the policy establishes clear standards to implement the Clean Water Act in a consistent manner and thereby reduces the harmful effects associated with the cooling water intakes on life in the ocean and estuaries, and is applicable to all currently operating coastal utilities including Diablo Canyon which was granted a temporary exemption; and

WHEREAS, Diablo Canyon's antiquated, "once-through cooling" system's intake and effluent of 2.5 billion gallons of water a day from the Pacific Ocean amounts to a significant portion of marine damage to the California coast;

BE IT RESOLVED, that xxxxxxxxxxxxxxxx urges the California State Water Resources Control Board to issue a ruling requiring that cooling towers be built to replace the antiquated and environmentally damaging "once-through cooling" system at PG&E's Diablo Canyon Nuclear Power Plant in order to meet the state's marine protection standards, and

BE IT FURTHER RESOLVED, that xxxxxxxxxxxxxxxx calls upon the Governor, our other state government representatives, and our environmental protection agencies to urge and support such a ruling.
